

ControlIQ Flow Atlas

User flows, system flows, data flows, and interaction sequences for the WSP regulatory compliance validation platform — drawn directly from the Product Requirements Document. Nothing here adds functionality the PRD doesn't already describe; where the PRD leaves a mechanism undecided, the diagram stops and the gap is named rather than filled in.

SOURCE DOCUMENT	REGULATIONS COVERED	BUILT FOR	TWO APPLICATIONS
ControlIQ PRD v8.0, Aug 2026	MiCA (EU 2023/1114) & DORA (EU 2022/2554)	EU-licensed Crypto Asset Service Providers	Firm Application · Platform Admin Portal

ORIENTATION

How to read this atlas

Every diagram cites the feature IDs (FR-, SA-, NFR-) it is built from, in a monospace line underneath. Where the PRD itself flags something as undecided — an open question in Section 15 or a workflow gap in Section 16 — the diagram is drawn only as far as the PRD commits, and the undecided part is called out beside it rather than resolved silently.

- Confirmed in PRD
- Open question (Section 15)
- Workflow gap (Section 16)
- Reading / assumption made here

SYSTEM FLOW · SECTION 1, 4, 5

Two applications, one platform

ControlIQ is two separate applications sharing one data platform: the Firm Application (Section 1.1) used by each crypto firm's compliance team, and the Platform Admin Portal (Section 4) used only by Sosinna's team. The Portal is invisible to firm users; the two only meet where content is published or an onboarding link is issued.

The Portal cannot see a firm's compliance data (test results, findings) — only firm-list metadata and, per the 25 Jun call, usage stats the firm agrees to share (SA-06, SA-08). This boundary is drawn as one-way arrows above; the open question is whether usage-stat visibility is opt-in per firm or contractual by default — unresolved in the PRD.

USER FLOW · SECTION 5

From enquiry to first login

Nine stages, three actors: the prospective firm, Sosinna's team, and the platform itself. Stage 3 (the legal agreement) is explicitly outside the system — the platform only records that it happened.

Cites: MKT-02, SA-16-21, FR-01-08, FR-15, FR-92-93, FR-104, FR-117-128

Open Whether a call-tree/reporting-manager gap can be acknowledged and onboarding still completed, or must be fully resolved before payment, is ON-05 — the diagram follows FR-122's wording, which assumes acknowledgement is sufficient.

Gap GAP-18 / GAP-19 / ON-01-03: the payment step's commercial mechanics (merchant of record, recurrence, provider) are unresolved. The diagram shows only the sequence the PRD commits to (details entered → payment → activation), not the payment internals.

Running a compliance test

Scheduling changed in v5.0: tests sit in a pending-item pool until the CCO manually assigns them (FR-78-80), rather than auto-populating a calendar. This diagram picks up from assignment

Cites: FR-21, FR-78-80, FR-82, FR-105, FR-106, FR-129, FR-131-136

● Gap GAP-15 / TS-05 / TS-06: when a test is fanned out across several testers (FR-106), who records the single Pass/Fail/Observation result required by FR-21/step 7 is undefined in the PRD. The diagram shows fan-out rejoining into one review step because that is what Section 7.1 states, but the PRD itself flags this join as unresolved.

● Gap GAP-21: FR-136 assigns a remediation owner to the whole test; FR-41 assigns owners per milestone per Finding. How a test with several Findings owned by different people fits the single "assign a remediation owner" outcome is not defined — not resolved in this diagram.

USER FLOW · SECTION 7.4

Business owner & the evidence request

The business side of a test, added in v5.0 and completed end-to-end in v8.0: an auto-populated distribution list, a per-item dashboard for the business owner, and an AI match check that gates both quality and AI spend.

Records request & verification

From test creation to a Verified request item.

CCO creates test — sets scope, request items

Cites: FR-83-91, FR-108-110, FR-131-134

All evidence must arrive through the platform — email and WhatsApp are explicitly not acceptable channels (FR-108). Where something does arrive by email, the recorded date is the upload date, not the email date.

Open EV-03: the PRD confirms the business owner reaches a dashboard from the letter link (FR-133), but not how they authenticate to it — a login-bearing role or a scoped expiring link. The diagram draws the dashboard as a destination without specifying the access mechanism, matching the PRD's own gap.

USER FLOW · SECTION 6

WSP upload & AI-assisted mapping

The firm's compliance manual, mapped to Requirement IDs by AI suggestion and human two-person sign-off, kept current by both scheduled and rule-change-triggered review.

WSP mapping & gap analysis

Section 6.1-6.5 as one flow.

Cites: FR-30–37, SA-13

85% accuracy commitment: the AI mapping suggestion must hit a minimum 85% verified accuracy at UAT (Section 6.2) — a confirmed, fixed-fee-included requirement, not an open item.

USER FLOW · SECTION 8

Findings & remediation

Every Fail or Observation becomes an independent Finding with its own severity, remediation plan, and closure path requiring two separate sign-offs.

Finding lifecycle

Section 8.1–8.3, including the four-hour DORA escalation path.

Cites: FR-38-47, FR-136, Section 8.1

SYSTEM FLOW · SECTION 4.5, 4.6

Regulation ingest, review & publish

Nothing reaches a firm without a human publish action. The pipeline is fetch → draft → review/edit/tag → (associate confirmation) → publish, with rejected items retained rather than deleted.

Portal-side content pipeline

Section 4.5's SA-12-15 and SA-23-24 as one system flow.

Cites: SA-03, SA-04, SA-12-15, SA-23, SA-24, FR-35

● Open AD-01: which associate-admin actions require Sosinna's confirmation — every publish, or only designated gates — is undecided. The diamond above is drawn generically for that reason.

SYSTEM FLOW · SECTION 7.2

Pending item pool & assignment

Replaces the v4.0 auto-scheduled calendar. Items become dated, live test instances only once a human assigns them.

Pool-to-instance state flow

FR-78-82 and FR-105-106 as a state diagram.

Active Requirement IDs ×
their required frequencies

Cites: FR-18, FR-21, FR-78-82, FR-105-106, FR-113, Section 12

● Gap TS-01: what happens to a pool item whose owed period ends while still unassigned — carry forward, mark overdue, or log as a missed obligation — is not defined beyond the alert firing.

Context diagram

ControlIQ as a single process, showing every external entity named in the PRD and what crosses the boundary. The regulator is deliberately not a live integration — the platform drafts a notification for a human to submit (FR-76).

External entities & boundary flows

Cites: Section 1.1, Section 2, FR-76, FR-138, NF-01

DATA FLOW DIAGRAM · LEVEL 1

Processes & data stores

The major processes from Sections 5–9 and the data stores each one reads or writes, matching the retention table in Section 2. The audit log is written by every process and never by anything else.

Process / store map

Cites: Section 2 (retention table), FR-04, FR-30-91, FR-92, FR-104, FR-129-136, NFR-04, NFR-07

SEQUENCE DIAGRAM · SECTION 7.1

Full testing workflow, actor by actor

This is the full testing workflow from Section 7.1, with the sequence diagram and flow chart.

The complete 16-step sequence from Section 7.1, with the request/evidence sub-flow (steps 2a/2b) and the v8.0 review outcomes folded in.

SEQUENCE DIAGRAM · SECTION 7.4

Records request & AI verification

SEQUENCE DIAGRAM · SECTION 5.7

Onboarding payment

Activation is driven by the provider's server-to-server webhook, never by the browser reaching a success page — a deliberate rule so closing the tab after paying can't leave a firm stuck, and reaching the success URL without paying can't unlock one.

● Gap

ON-01-03: merchant of record, currency/instrument, and whether this is a one-off or recurring charge are all unresolved in the PRD. The diagram shows only the mechanics NFR-12 and FR-123-126 commit to.

SEQUENCE DIAGRAM · SECTION 4.5

Regulation fetch, review & publish

REFERENCE

Assumptions & open questions behind these diagrams

Pulled from Section 15 (Open Questions) and Section 16 (Workflow Gaps) of the PRD, limited to the items that shape a diagram above. Nothing here is new — each row is the PRD’s own unresolved point, cross-referenced to the diagram it affects.

REF	QUESTION / GAP	AFFECTS	STATUS
EV-03	How does a business owner without a platform login authenticate to their evidence dashboard?	Business owner & evidence; Records request sequence	● Partial
GAP-15 / TS-05 / TS-06	Under article fan-out across testers, who records the one formal test result, and is a shared finding counted once or twice?	Running a compliance test	● Open
GAP-21	Does a test-level remediation owner (FR-136) sit above per-milestone owners (FR-41), or replace them?	Running a compliance test; Findings & remediation	● Open
TS-01	What happens to a pending pool item whose owed period ends while still unassigned?	Pending pool & assignment	● Open
ON-01 / ON-02 / ON-03	Who is the merchant of record; is the onboarding payment one-off or recurring; which provider and instrument?	Onboarding payment sequence	● Estimation blocker
ON-05	Can onboarding complete with an acknowledged call-tree/reporting-manager gap, or must the chain be complete before payment?	Enquiry to first login	● Open
AD-01	Which associate-admin actions in the Portal require Sosinna's final confirmation?	Regulation ingest pipeline	● Open
GAP-16 / EV-07	Is the proposed follow-up "request portal" in scope? Not yet approved — excluded from all diagrams above.	Business owner & evidence	● Not approved
GAP-12	Does the FR-25 exportable checklist survive alongside the FR-83 tracked request register, or does one replace the other?	Business owner & evidence	● Open
GAP-13	Who can see a business-side upload between receipt and Lead Tester verification?	Business owner & evidence	● Open

GAP-17	Do the WSP gap analysis (FR-34) and the per-test gap identification (FR-112) share one mapping/register, or are they two features?	WSP upload & mapping; Records request	● Open
EV-01 / EV-02 / EV-08	Accuracy threshold for the AI document-match check and the FR-112 gap identification; definition of "critical control" for mandatory human verification.	Business owner & evidence	● Estimation blocker

● Reading Where a diagram needed a single path through an ambiguous point to stay readable (for example, fan-out rejoining into one CCO review step), it follows the PRD's own Section 7.1 narrative rather than inventing a resolution — the corresponding gap is flagged beside it rather than silently closed.
